

## ***Digital implant impression***

The success of any implant supported restoration depends on the accuracy of the impression taken, to accurately position the implants. Passive fit and occlusion of such restorations also depend on the accuracy of the impression. Due to the dimensional changes of impression materials, the rise of digital impressions has proven its value. There are several digital techniques advocated to record the implant position, whether within a full digital flow or as a part of the restoration construction procedure. A review of such techniques is important to grasp the importance of digital impressions.
