

Aesthetic rehabilitation using veneers and all-ceramic crowns

Although aesthetics is based on individual beliefs, there are some basic principles that can influence a person's appearance. Important factors seem to be the shade, the smile line and smile disharmony. Smile enhancement involves synergy between pink and white aesthetics. It is very important in complex cases to have control of each procedure, namely, restorative, surgical and laboratory, to achieve success in the whole rehabilitation. The team of clinicians and the technician have many ways of transforming the soft and the hard tissues predictably. In this presentation a series of clinical cases will be presented highlighting the importance of selecting the right technique, the proper ceramic material

In this case, the patient wanted to improve her smile due to the parameters mentioned before.
