

Current Innovations in Non-Surgical Management of Periodontal Disease

Even though managing and treating periodontal disease is not the most complicated of therapies, it requires due diligence and extremely detailed diagnostic skills. Lesions have to be accurately identified and recorded. Non-surgical management of the situation proves to be of extreme benefit and great use. This presentation will highlight the most modern approaches in controlling inflammation and the infective component of periodontal lesions with very simplistic methods. It will also present an original approach to how compromised teeth with extreme loss of attachment can also be managed and kept into service
